

304 Stainless Steel Sheet and Plate

304 Stainless Steel Sheet and Plate is the ideal choice due to its tensile strength, high resistance to rust, and high fabrication ability. Cost-effective and versatile material, 304 Stainless Steel Sheet and Plate is suitable for most applications where durable support and corrosion resistance are required. Stainless steel sheet and plate also provides excellent weight-bearing properties, high corrosion resistance, superior durability, high strength-to-weight ratio, fair resistance to thermal and electrical conductivity, ease of fabrication, ease of cleaning and more.

316 Stainless Steel Sheet and Plate*

316 Stainless Steel Sheet and Plate is also referred to as marine grade stainless steel. It provides advanced corrosion and pitting resistance in more aggressive environments, making it ideal for applications involving salt water, acidic chemicals, or chloride. It is commonly used in the food and pharmacy industry where it is required to minimize metallic contamination. It also provides superior corrosion/oxidation resistance, withstands chemical and high-saline environments, excellent weight-bearing properties, superior durability and is non-magnetic.

Stainless Steel Sheet and Plate Applications

Stainless Steel Sheet and Plate is used in numerous types of industrial applications, including:

- Aerospace Structures
- Architectural Structures
- Cryogenics
- Food and Beverage
- Food Processing Equipment
- Oil and Petroleum Refining Equipment
- Pharmaceutical Equipment
- Pressure Containing Applications
- Pulp and Paper Processing
- Sanitary Uses
- Textile Industry Equipment
